Colluli Potash Project
Positively Unique
Globally Unrivalled

Paul Donaldson, Managing Director
Arlington Pre-Daba Conference, Cape town
February 2017
Forward looking statements and disclaimer

The information in this presentation is published to inform you about Danakali Limited (the “Company” or “DNK”) and its activities. DNK has endeavoured to ensure that the information enclosed is accurate at the time of release, and that it accurately reflects the Company’s intentions. All statements in this presentation, other than statements of historical facts, that address future production, project development, reserve or resource potential, exploration drilling, exploitation activities, corporate transactions and events or developments that the Company expects to occur, are forward-looking statements. Although the Company believes the expectations expressed in such statements are based on reasonable assumptions, such statements are not guarantees of future performance and actual results or developments may differ materially from those in forward-looking statements.

Factors that could cause actual results to differ materially from those in forward-looking statements include market prices of potash and, exploitation and exploration successes, capital and operating costs, changes in project parameters as plans continue to be evaluated, continued availability of capital and financing and general economic, market or business conditions, as well as those factors disclosed in the Company’s filed documents.

There can be no assurance that the development of the Colluli Project will proceed as planned. Accordingly, readers should not place undue reliance on forward looking information. Mineral Resources and Ore Reserves have been reported according to the JORC Code, 2012 Edition. To the extent permitted by law, the Company accepts no responsibility or liability for any losses or damages of any kind arising out of the use of any information contained in this presentation. Recipients should make their own enquiries in relation to any investment decisions.

Mineral Resource, Ore Reserve and financial assumptions made in this presentation are consistent with assumptions detailed in the Company’s ASX announcements dated 25 February 2015, 4 March 2015, 19 May 2015, 23 September 2015, 30 November 2015 and 15 August 2016 which continue to apply and have not materially changed. The Company is not aware of any new information or data that materially affects assumptions made.

Chairman
Seamus Cornelius
Experienced mining executive and corporate lawyer with over 20 years experience in the resources sector. Chairman of Duketon Mining, Montezuma Mining, and Buxton Resources

Managing Director
Paul Donaldson
Mining executive with over 25 years in mining, manufacturing and marketing, with large scale mining operational and project management experience.

Non-Executive Director
Tony Kiernan
25+ years experience in the commercial law, corporate advisory and government relations within the mining industry. Chairman of Pilbara Minerals, Venturex Resources and Chalice Gold Mines with previous operations in Eritrea

Non-Executive Director
John Fitzgerald
Experienced mining executive specialising in corporate debt and advice in the mining sector. Chairman of Dakota Resources and Director of Northern Star Resources

Non-Executive Director
Zhang Jing
More than 15 years of international trading and business development experience and project management roles in public listed companies in China

Non-Executive Director
Liam Cornelius
Founding Director with over 20 years experience in commodity exploration within Australia, Asia and Africa

### A world class SOP project - Unrivalled resource, economics and diversification potential

#### A GAME CHANGING, GLOBALLY UNIQUE RESOURCE THAT HAS NO PEER

| World class resource<sup>1</sup> | • Shallow mineralisation – commencing at 16m  
  • 1.3 billion tonne resource  
  • > 200 year mine life  
  • 1.1 billion tonne ore reserve |
|---|---|
| Premium product with limited global production centres | • Chloride free  
  • Multi-nutrient  
  • Limited supply |
| Positively unique with unrivalled growth and diversification potential | • Salts in solid form – a key advantage over potassium brines and solution mines  
  • Unique capability to produce **diverse range of potash types**  
  • The right combination of potassium salts for low energy, high yield conversion to SOP  
  • Monetisation potential for kieserite, gypsum, magnesium chloride and sodium chloride |
| Commercially proven process | • Same production process as current low cost producers  
  • Process design tested and confirmed |
| Outstanding Economics | • Industry leading capital intensity  
  • Low incremental growth capital  
  • Bottom quartile cost curve position |
| Unrivalled access to coast and global markets | • Epicentre of booming population growth  
  • 200 km from export facility  
  • 60 km from Red Sea Coast |
| Exceptional feed grade | • One of the highest grade SOP deposits in the world  
  • Significantly lower waste generation than potassium rich brines |

1 Danakali DFS 30 November 2015  
2 ASX Announcement 25 July 2016  
3 ASX Announcement 1st February 2017
SOP is the PREMIUM POTASH

SOP IS A HIGH VALUE, CHLORIDE FREE SOURCE OF POTASSIUM

Premium Price
- Sustained price premium of over 100% relative to MOP\(^1\)
- Secondary production provides high margins for primary producers

Essential Macro-nutrient
- Potassium is an essential, non-substitutable nutrient
- SOP critical for high value, chloride intolerant crops such as fruits, nuts and vegetables
- SOP also provides sulphur

Limited supply
- Limited economically exploitable primary resources
- Currently over 50% of world’s supply is from expensive secondary processing of MOP (KCl)\(^2\)

Increasing Importance
- Demographic shift to high value specialty crops
- Environmentally friendly – no chlorine, low salinity index
- Highly suited to increased focus on improved water efficiency in agricultural sector

30% increase in demand forecast over the next decade\(^2\)

Over 60% expected to be produced from high cost secondary production by the end of the decade\(^2\)

Photo: SOP produced from Colluli potassium salts in standard, Granular and soluble form

Source: Greenmarkets
1 MOP prices based on FOB Vancouver prices, SOP prices based on FOB Utah prices
2 CRU
Colluli – a positively unique resource and the most attractive greenfield primary production SOP project

- **There is only one Colluli!**
- Massive resource with ease of access
  - No clearing
  - No inhabitants within mining agreement area
  - Flat – No vegetation
  - Shallow mineralisation allows open cut mining and extraction of salts in solid form
- The most favourable combination of potassium bearing salts suitable for production of SOP, SOP-M and MOP
- Proximity to coast and open cut method provides monetisation potential of other salts within the resource (rock salt, magnesium chloride, gypsum, magnesium sulphate)
- Strong government support
- Mining Licenses Award
- Strong local support
  - Over 300 jobs for Eritrean Nationals in Phase I
  - Additional 150 jobs in Phase II

Colluli sits in the world’s largest unexploited potash basin
Colluli is the ONLY primary SOP resource that allows extraction and processing of salts in solid form.

**THE SALT COMBINATION AND PRESENTATION PROVIDES SIGNIFICANT ADVANTAGES RELATIVE TO BRINE ALTERNATIVES**

- **Higher potassium yields**
- **Simplicity**
  - Brine chemistry management is complex
  - Colluli processing plant utilises simple, proven, mineral processing units
- **Lower energy input**
  - Colluli salts require no heating. In contrast, potassium brines can require heating to over $50^\circ C$ for thermal decomposition\(^1\)\(^2\)
- **Consistent, predictable feed grade**
- **Production rates not weather dependent**
  - Production rates from brines directly proportional to weather conditions
- **Smaller footprint**
  - No pre-production ponds

---

\(^1\) Potash, Garret. P, pp441 – 445

\(^2\) Reward Minerals Presentation, 2013
Advantages of solid salt extraction and processing over brines is clear

Colluli process design

Colluli contains the right combination of potassium salts for ambient temperature conversion to SOP

- The combination of sylvite and kainite in the Colluli resource is ideal for ambient temperature, high yield conversion to SOP
- Resources lacking sufficient sylvite require thermal decomposition typically at approximately 50°C which increases energy intensity and reduces yield
- Heated brines typically achieve potassium yield 10% to 15% lower than ambient conversion

Simple processing – Crush – Float – Mix – Dry - Truck
Grade is King!
Colluli is a premium grade SOP resource

• Colluli is a premium resource and one of the highest grade SOP deposits in the world\(^1\)

• Very high potassium content and very low waste to product (W:P) ratios

• A broad quality range exists in potassium brines – brines are not the same

• Higher W:P ratio brines typically require higher evaporation rates, large capital intensive evaporation ponds and high volumes of waste salt management

---

1. Colluli DFS mine plan - Colluli waste includes all overburden (clastics, rock salt) and salt extracted in processing operations
2. BC Insight Fertiliser Magazine
3. Waste calculated from total dissolved solids (TDS) data on company websites (sum of all salts in brine less SOP product). Brine waste associated with trenching has been excluded from the calculation (favouring a lower waste to product ratio to the greenfield brine projects). Potassium yields of 70% assumed for brines.
Premium grade and low energy process = industry leading cost curve position

COST CURVE POSITION WILL PROVIDE COLLULI WITH INDUSTRY LEADING RETURNS THROUGHOUT THE COMMODITY CYCLE

Ex-works cash costs for SOP production (US$/t)

- Operating costs are related to grade and mineralogy
- Combination of sylvite and kainite utilised by Xingjiang LuoBupo. High grade and low cost (similar grade and process to Colluli)
- Processing costs become less favourable with lower grade or unfavourable salt combination which results in thermal decomposition (eg K+S thermally reacts sylvite and kieserite at 80°C)

- Production of SOP using same potassium feed salts as Colluli and same processing technology
- Combination of sylvite and kainite is the most cost, energy and yield efficient
- Colluli will be the only project that starts with salts in solid form in contrast with brines that need to generate a harvest salt

Source: CRU, Integer, Company Research
1. BC Insight Fertiliser Magazine
2. CRU
The Colluli resource is positively unique:

- Colluli has the **right combination of potassium salts** for low cost, high yield SOP production
- It is the **shallowest evaporite deposit in the world** – making it amenable to open cut mining
- Extraction of salts in solid form **negates the need for large evaporation ponds** – reducing capital intensity
- Mining and processing salts in solid form will result in **stable, consistent, and reliable production**

Paul Donaldson, Managing Director and CEO, Arlington Pre-daba event, February 2017
Eritrea – safe, stable and progressive

DANAKALI HAS BEEN OPERATING IN ERITREA SINCE 2009 AND HAS FOUND IT TO BE SAFE, STABLE AND DEVELOPMENT FOCUSED

Positive Eritrean outlook

- Fraser Institute Mining survey ranked **Eritrea 6 of 20 for African mining investment** ahead of jurisdictions such as South Africa, Zambia, Tanzania and Mozambique

- **The Danakali experience in Eritrea:**
  - Safe and friendly
  - High degree of focus on health and education
  - Development focussed with an emphasis on the agricultural, industrial and mining sectors
  - Stable government
  - Building up a track record of success in a maturing mining industry
  - No evidence of corruption
  - Gender equality

- **CMSC (ENAMCO and Danakali) are progressing a sustainable development framework that addresses the policy, management plans and compliance monitoring in key areas including:**
  - Human Rights
  - Communities
  - Anti corruption
  - Health and Safety

1. 2015 Fraser Institute Annual Survey of Mining Companies
There are multiple high profile examples of mining investment in Eritrea

Eritrean mining background

- Nevsun Resources (TSX:NSU) is a major Eritrean-focused mining company
  - JV company formed with ENACMO and now operates Bisha copper mine
  - Successful modular JV development with ENAMCO paves the way for Colluli JV
  - Significant shareholders in Nevsun are globally recognised investors who have demonstrated comfort with investment in Eritrea
- Purchase of 60% of Asmara (copper, zinc, gold) by Chinese investor for C$85m
- Joint venture agreement and relationship with ENAMCO is a key enabler of project success

Major Eritrean mining developments

- **Bisha**
  - Undergoing third expansion

- **Zara**
  - Commissioned and producing

- **Asmara**
  - Currently commencing construction

Supportive laws for mining investment

- A stable tax regime, with corporate tax rate of 38%
- Accelerated depreciation – straight line over 4 years
- Generous reinvestment deduction (5% gross income)
- 10 year carrying forward of losses
- 0.5% import duty on mining inputs
- Simple “one stop” licensing system

...and there have been no changes to mining legislation in Eritrea

Source: Nevsun Resources August 2015 corporate presentation, Bloomberg, company websites
Partnership with ENAMCO continues to be a key enabler for the project development

**DNK AND ENAMCO ARE ADVANCING A WORLD CLASS POTASH PROJECT**

Government support and strategic alliance

- Eritrea is a stable jurisdiction with a rapidly emerging mining industry.
- Danakali has a strong, effective working relationship with the Government through its joint venture.
- Agreement with the Eritrean National Mining Corporation (ENAMCO).
  - ENAMCO and Danakali each hold a 50% ownership in the Colluli Mining Share Company.
  - Project Development Costs for initial development will be funded by up to 70% debt and 30% equity.
  - The CMSC board was established following the incorporation of CMSC in March 2014. The board is overseeing the project development.
  - CMSC has a board of 5, with 3 members from Danakali and 2 from ENAMCO.

The structure allows Government direct insight into the mining industry, which is an important part of Eritrea’s development.
Colluli – there is only one

- SOP is a **high quality, chloride free potash with limited economically exploitable primary resources**
- Colluli is **the most attractive and advanced stage primary SOP production project in the world**
- Colluli is the most **fundable and scalable potash project with unrivalled resource, diversification and growth potential, and access to global markets**
- The project is in **close proximity to established infrastructure**, and has **standout economics relative to peers**
- Joint Venture partnership is a **key enabler**
- Front end engineering design, optimisation and contract tendering have **commenced**
- Mining Agreement **has been signed** and Mining License **Awarded**
- Offtake MOUs are progressing to **high level commercial terms under Heads of Agreements**
Colluli - Positively Unique
Competent persons statement

Resource statement

The 2015 Colluli Potash Mineral Resource is reported according to the JORC Code and estimated at 1,289Mt @11% K2O Equiv. The Mineral Resource is classed as 303Mt @ 11% K2O Equiv Measured, 951Mt @ 11% K2O Equiv Indicated and 35Mt @ 10% K2O Equiv Inferred. The Competent Person for this estimate is Mr. Stephen Halabura, M. Sc., P. Geo., Fellow of Engineers Canada (Hon), Fellow of Geoscientists Canada, and a geologist with over 25 years’ experience in the potash mining industry. Mr. Halabura is a member of the Association of Professional Engineers and Geoscientists of Saskatchewan, a Recognised Professional Organisation (RPO) under the JORC Code and has sufficient experience relevant to the style of mineralisation and type of deposit under consideration and to the activity which he is undertaking to qualify as a Competent Person as defined in the JORC Code.

The 2015 Colluli Rock Salt Mineral Resource is reported according to the JORC Code and estimated at 347Mt @96.9% NaCl. The Mineral Resource is classed as 28Mt @ 97.2% NaCl Measured, 180Mt @ 96.6% NaCl Indicated and 139Mt @ 97.2% NaCl Inferred. The Competent Person for this estimate is Mr. John Tyrrell, a geologist with more than 25 years’ experience in the field of Mineral Resource estimation. Mr Tyrrell is a member of the AusIMM, is a full time employee of AMC Consultants Pty Ltd and has sufficient experience relevant to the style of mineralisation and type of deposit under consideration and to the activity which he is undertaking to qualify as a Competent Person as defined in the JORC Code.

Mr. Tyrell & Mr. Halabura consent to the inclusion of information relating to the Mineral Resource Statements in the form and context in which they appear.

Ore Reserve statement

The November 2015 Colluli Ore Reserve is reported according to the JORC Code and estimated at 1,113Mt @10% K2O Equiv. The Ore Reserve is classed as 286Mt @ 11% K2O Equiv Proved and 827Mt @ 10% K2O Equiv Probable. The Competent Person for the estimate is Mr Mark Chesher, a mining engineer with more than 30 years’ experience in the mining industry. Mr. Chesher is a Fellow of the AusIMM, a Chartered Professional, a full-time employee of AMC Consultants Pty Ltd, and has sufficient open pit mining activity experience relevant to the style of mineralisation and type of deposit under consideration to qualify as a Competent Person as defined in the JORC Code. Mr Chesher consents to the inclusion of information relating to the Ore Reserve in the form and context in which it appears.

In reporting the Mineral Resources and Ore Reserves referred to in this public release, AMC Consultants Pty Ltd acted as an independent party, has no interest in the outcome of the Colluli Project and has no business relationship with Danakali Ltd other than undertaking those individual technical consulting assignments as engaged, and being paid according to standard per diem rates with reimbursement for out-of-pocket expenses. Therefore, AMC Consultants Pty Ltd and the Competent Persons believe that there is no conflict of interest in undertaking the assignments which are the subject of the statements.
SOP demand will increase by over 30% over the next decade

SOP IS A MULTI-NUTRIENT FERTILISER ESSENTIAL FOR HIGH VALUE, CHLORIDE INTOLERANT CROPS

- A significant increase in global SOP consumption is forecast \(^1\)
- 33% increase in demand for high value fruit and vegetables till 2050 \(^3\)
- Colluli is well positioned as an advanced stage project to take advantage of global growth

\(^1\) CRU
\(^2\) IC Potash
\(^3\) FAO

Orange without SOP\(^2\)
Orange with SOP\(^2\)
Over 60% of SOP supply will come from high cost secondary production by 2020

LACK OF ATTRACTIVE PRIMARY PRODUCTION PROJECTS REQUIRES INCREASED HIGH COST SUPPLY TO MEET DEMAND

- Lack of attractive primary SOP projects requires additional secondary production to meet growing demand - high cost secondary production requires thermal conversion of sulphuric acid and potassium chloride to produce sulphate of potash (SOP)
- Acid management, storage and disposal cause ongoing challenges for secondary producers, adding to conversion costs
- Secondary producers create a high price floor for primary producers who will continue to enjoy high margins

% SOP from secondary production\(^1\)

1  CRU

Increasing SOP supply from high cost, secondary production creates ongoing price support

1 Unicef
Long-term economic, social and community dividends

**ENGAGEMENT WITH COMMUNITY AND KEY STAKEHOLDERS HAS GENERATED STRONG SUPPORT FOR COLLULI DEVELOPMENT**

Colluli will create over 300 permanent jobs for locals and Eritrean nationals by 2019, and over 450 by 2025.
Monetisation potential beyond SOP

Unrivalled multi agri-commodity potential

**MOP**
- Improves yield for wide range of crops
- Most concentrated form of granular potassium
- Demand is elastic (easy to substitute)
- Market is well supplied by global potash majors
- Generally higher development costs

~85% of potash supply

**SOP**
- Danakali’s key focus
- Improves yield of high value crops
- Suitable for chloride intolerant crops
- Demand is inelastic (not as easy to substitute, premium product leads to sticky demand)
- Global supply shortage of primary resources
- Sulphur is a key nutrient
- Fewer natural sources
- Higher margin

~10% of potash supply

**SOP-M**
- Demonstrated production from Colluli
- Limited supply and carries a price premium
- High grade, chloride free premium fertiliser
- Multi-nutrient fertiliser suitable for crops where three major nutrients are required
- SOP-M production ability confirms Colluli’s multi agri-commodity business potential

~3% of potash supply

**Kieserite**
- An effective source of both magnesium and sulphur (magnesium sulphate)
- Suitable for all types of crops and use in any soil type
- Identified in potassium salt seams
- Volumes currently being evaluated

**Gypsum**
- Source of calcium and sulphur
- Improves acid soils and treats aluminium toxicity
- Improves soil structure and water infiltration
- Reduces run off erosion
- Detected within the Colluli tenements

Additional agri-product potential

---

1. CRU
Colluli continues to positively advance

Front End Engineering and Design (FEED) Initiated
- Globally recognised, highly reputable, multi-national construction and engineering company, Fluor have been appointed to lead the FEED and optimisation process
- Global Potash Solutions, Knight Piésold and Elemental Engineering appointed to FEED team
- Optimisation workshops underway with focus on capital and operating cost reduction

Offtake Discussions Well Progressed
- MOUs now converting to Heads of Agreement
- High level commercial terms outlined
- Continued high level of interest in product offtake

Mining Agreement and Mining License
- DFS submitted to Ministry of Energy and Mines
- SEIA approved in December
- Mining agreement and license discussions have been progressing over the past few months and are nearing completion
Nevsun Resources – Case study
Cumulative Capex Spend > US$600m
Shareholder dividend > US$100m

Nevsun market capitalisation compared to commodities performances

Capex invested by Nevsun into Bisha mine and dividend paid to shareholders
2017 Plan

• Finalise the Mining Agreement and Mining License
• Complete front end engineering and optimisation
• Commence geotechnical work at recovery pond site
• Continue building organisational capability
• Finalise equipment lists and develop procurement plans and vendor packages
• Tender key contracts – mining and power generation
• Finalise detailed construction schedule
• Commence organisational readiness planning
• Convert offtake heads of agreements to binding agreements
• Finalise project funding and commence construction
